

Vaughn R. Steele, Ph.D.

September 2023

Yale University
School of Medicine
Department of Psychiatry
200 Retreat Avenue
Hartford, CT 06106
vaughn.steele@yale.edu

Current Positions:

- 2020-Present Assistant Professor (ladder-track), Yale University, School of Medicine, Department of Psychiatry
- 2020-Present Director of The Steele Lab, Olin Neuropsychiatry Research Center, Institute of Living, Hartford Hospital

Research Positions Held:

- 2011-2014 Postdoctoral Fellow – The Nonprofit Mind Research Network
A subsidiary of Lovelace Biomedical and Environmental Research Institute
- 2014-2015 Assistant Professor of Translational Neuroscience (non-tenure-track; soft money) – The Nonprofit Mind Research Network; A subsidiary of Lovelace Biomedical and Environmental Research Institute
- 2015-2019 Postdoctoral Fellow (Intramural Research Training Award) – National Institute on Drug Abuse
- 2018-2019 Postdoctoral Fellow in the Center on Compulsive Behaviors – National Institutes of Health

Educational History:

- 2004 B.A., magna cum laude in psychology, University of Minnesota, Department of Psychology, Minneapolis, Minnesota
- 2011 Ph.D., in cognitive and biological psychology, University of Minnesota, Department of Psychology, Minneapolis, Minnesota

Awards and Honors:

- 2003 Waller Scholarship, University of Minnesota
Annually awarded to only 75 undergraduate students based on academic merit
- 2003-2009 Gough awards for Graduate Travel, Department of Psychology, University of Minnesota
- 2004 Graduated *Magna Cum Laude* in Psychology, University of Minnesota
- 2004 Information Technology Fellow from the College of Liberal Arts, University of Minnesota.
- 2006 Tursky student poster award winner, Society for Psychophysiological Research Annual Meeting, Vancouver, BC Canada.
- 2007 Graduate Research Partnership Program Fellowship, College of Liberal Arts and Office of the Dean of the Graduate School and Vice President for Research, University of Minnesota.
- 2009 Student travel award winner, Society for Psychophysiological Research Annual Meeting, Berlin, Germany.
- 2010 NeuroImage Editors' Choice Award Winner, 2010
- 2013 Selected as Society for Neuroscience's "Hot Topic in Neuroscience"
- 2016 Young Investigator Award presented by the University of Rochester Institute of Neuromedicine and the Silvio O. Conte Center

- 2018 Center on Compulsive Behaviors (CCB) Postdoctoral Fellowship. The CCB funds outstanding NIH postdoctoral fellows at the intramural research program.
- 2019 Society of Biological Psychiatry Travel Fellowship Award. Selection criteria include past excellence in scholarly work, potential for scholarly growth in biological psychiatry and clinical neuroscience, and overall excellence.
- 2020 Early Career Investigator Showcase (ECIS) awardee from the joint National Institute on Drug Abuse and National Institute on Alcohol Abuse and Alcoholism mini convention. ECIS highlights 8 early-stage investigators to present their program of research.
- 2021 Jim Bowers Research Fund Award awarded by Hartford Hospital for outstanding research applications.
- 2022 Jim Bowers Research Fund Award awarded by Hartford Hospital for outstanding research applications.

Modulating temporoparietal junction mentalizing-related activity in autism spectrum disorder using transcranial magnetic stimulation

A core characteristic of autism spectrum disorder (ASD) is a deficit in mentalizing (our ability to create mental representations of others). This project will delineate the mechanistic effects of inhibitory vs. excitatory repetitive transcranial magnetic stimulation (rTMS) of the right temporo-parietal junction (TPJ), specifically in modulating mentalizing task-related (MTR) neural activity (measured with functional magnetic resonance imaging) in adults diagnosed with ASD compared to matched controls. Our rTMS manipulation, administered in a double-blind, counterbalanced fashion, includes one session each of excitatory (intermittent theta-burst stimulation, iTBS), inhibitory (continuous TBS, cTBS), and sham sequences. The rTMS will be guided with individualized electric-field modeling calculated from a structural MRI scan collected on the baseline session.

Role: MPI

Hartford Hospital Research Foundation (PI: Bond) 9/1/2022-8/31/2023
Can transcranial magnetic stimulation decrease food reinforcement among surgical weight loss-seeking adults who have high levels of hedonic hunger and responsivity to food cues? \$14,919 direct

Bariatric surgery is the most effective obesity treatment, although there is substantial individual variability in weight and health outcomes. Bariatric patients who have a strong drive to eat in response to the reward of palatable foods are more likely to overeat and experience suboptimal weight outcomes. This at-risk patient subgroup may benefit from transcranial magnetic stimulation (rTMS), a non-invasive brain stimulation technique that has shown promise for reducing cravings and consumption of addictive drugs and food. This study tests whether rTMS can reduce the reinforcing value of a palatable food (relative to money) among patients seeking bariatric surgery who have high levels of hedonic hunger and disinhibition as measured with self-report and electroencephalography (EEG).

Role: Co-I

Yale Center for Clinical Investigation – Scholar Award (PI: Steele) 8/1/2022-7/31/2024
Testing malleability of executive control processes measured with event-related potentials in a sample prescribed methadone for opiate use disorder \$50,000 direct

This project examines neuromodulation of dysregulated circuits in opioid use disorder (OUD) as a potential efficacious treatment. Event-related potentials during executive control processes are measured before and after an acute excitatory session of transcranial magnetic stimulation (TMS). We assess whether TMS induces change in executive control processes.

Role: PI

Brain and Behavior Research Foundation Young Investigator Grant (PI: Steele) 1/15/2022-1/14/2024
Circuit-Based Transcranial Magnetic Stimulation in \$69,722 direct
Opiate Dependent Individuals

This project examines neuromodulation of dysregulated circuits in opioid use disorder (OUD) as a potential efficacious treatment. Magnetic resonance imaging is measured before and after an acute excitatory or inhibitory session of transcranial magnetic stimulation (TMS). We probe cue-reactivity and executive control and assess neuroplastic change induced by the two TMS sequences.

Role: PI

Hartford Hospital Research Foundation (PI: Gruner) 7/18/2021-7/17/2022
Transcranial Magnetic Stimulation of the Orbitofrontal Cortex \$19,173 direct
in Obsessive Compulsive Disorder

Transcranial magnetic stimulation applied as an acute therapeutic to orbitofrontal cortex (BA10) in individuals with obsessive compulsive disorder (OCD) is examined. Magnetic resonance imaging is measured after an acute inhibitory or excitatory theta-burst stimulation session to identify specific neuromodulation parameters for effectively treating OCD. Results from this proof-of-concept study will help develop larger clinical trials to develop a neuromodulation intervention for OCD.

Role: Co-I

Hartford Hospital Research Foundation (PI: Steele) 9/10/2020-9/09/2023
Modulation of Circuits in an Opioid Use Disorder Sample \$17,573 direct

This project examines neuromodulation of dysregulated circuits in opioid use disorder (OUD) as a potential efficacious treatment. Magnetic resonance imaging is measured before and after an acute active or sham session of intermittent theta-burst stimulation session to identify malleable circuits related to OUD. Several cognitive functions will be probed during this study, including: affective processing, cue-reactivity, and executive control. Larger clinical trials will be designed based on the outcome of this initial trial.

Role: PI

K12 DA000167 (M-PI: Potenza, O'Malley) 8/1/2022 – 7/31/2025
 NIH NIDA
 Clinician Scientist Training Program

The Division of Substance Abuse, Department of Psychiatry at Yale University School of Medicine supports up to 3 scholars through their NIDA-funded Clinician Scientist Training Program. This program provides intensive training in research methods for clinical and translational investigation of drug abuse. The multidisciplinary, translational program enables research that moves rapidly in both directions from preclinical projects (“bench”) to clinical studies (“bedside”). The training goal for this program is to provide Clinical Scientist Scholars at the junior faculty level with an opportunity to devote virtually full-time effort during the initial phase of their careers to learning research skills and conducting research projects as a critical step toward launching careers as independent research scientists. This is accomplished by offering salary support to Clinical Scientist Scholars and moderate research funds to support pilot studies to develop meritorious research proposals.

Role: Clinical Scientist Scholar (Partial Salary support 8/1/22-12/31/24)

Using Theta-Burst Stimulation as a Treatment to Reduce Cocaine Use Disorder

Intermittent theta-burst stimulation (iTBS) applied over the left-dorsolateral prefrontal cortex will be assessed as an efficacious treatment in a fully double-blind, placebo control randomized clinical trial. All cocaine dependent participants will receive contingency management and be assigned to receive either active or placebo iTBS over a 2-week treatment regimen. Magnetic resonance imaging assessing of structural, diffusion tensor imaging (DTI), functional connectivity (e.g., resting state measures), arterial spin labeling (ASL), magnetic resonance spectroscopy (MRS) and functional magnetic resonance imaging assessing cognitive and affective processes including cue reactivity, reward processing, and executive control will be collected at several time points. First, during an initial characterization phase prior to the initiation of the iTBS. Second, before and after the iTBS is administered on the first day of treatment. Third, on two separate days post-treatment. This method allows specific comparisons of the neuroplastic changes related to acute and chronic iTBS administration. These neuroplastic changes will be related to change in cocaine use behaviors collected over the 6-month follow-up post-treatment.

<i>RII Track-2 FEC: Developmental Chronnecto-Genomics (Dev-CoG):</i>	\$1,500,000/year direct
<i>A Next Generation Framework for Quantifying Brain Dynamics and Related Genetic Factors in Childhood</i>	\$5,858,211 total

The rapid development of the brain’s network architecture during childhood provides an unprecedented opportunity to gain a more complete understanding of the role of oscillatory behavior and network connectivity in normal brain functioning and cognitive development. New Mexico, Nebraska, and Louisiana envision a consortium on developmental chronnecto-genomics (Dev-CoG) whose overarching goal is to advance understanding of childhood brain connectivity by developing new analytic approaches to study connectivity over brief and extended periods of time (the chronnectome), via multiple neuroimaging modalities, and in turn determine how their genetic underpinnings further influence this developmental trajectory.

Role: Faculty (Role declined due to accepting an intramural position at the National Institute on Drug Abuse)

Professional Service:

2003-2004	President of Psi Chi, University of Minnesota
2006-2008	Center for Cognitive Sciences Retreat Committee, University of Minnesota
2006	Supervised APA Summer Institute for Undergraduates, University of Minnesota
2006-2007	Presentation for College in the Schools Program, University of Minnesota
2007	Supervised Undergraduate Research Experience Program students, University of Minnesota
2007-2008	Program Committee Representative Society for Psychophysiological Research Committee to Promote Student Interests
2008-2012	Chair, Newsletter Subcommittee Society for Psychophysiological Research Committee to Promote Student Interests

- 2011-2014 Youth Science Liaison, The Mind Research Network
- 2011-2015 Postdoctoral/Early Career Subcommittee Member
Society for Psychophysiological Research Committee to Promote Student Interests
- 2016 Chair and Organizer
National Institute on Drug Abuse Special Interest Group – Network Connectivity
- 2017-2018 Chair and Organizer
National Institute on Drug Abuse Special Interested Group – Neuromodulation
- 2017-2019 Supervised Intramural Research Training Award postbaccalaureate fellow, National Institute on Drug Abuse
- 2017 Supervised Summer Internship Program fellow, National Institute on Drug Abuse
- 2018 Supervised Summer Internship Program fellow, National Institute on Drug Abuse
- 2019 Chair and Organizer
NIH/NIDA Summer Journal Club – Neuroimaging of Addiction
- 2020-Present Chair and Organizer
Olin Neuropsychiatry Research Center Junior Investigator Lunch
- 2021-2023 Yale School of Medicine Anti-Racism Task Force
Faculty Development Subcommittee member
- 2021-Present Chair and Organizer
Olin Neuropsychiatry Research Center Journal Club and Seminar Series

Teaching Experience:***University of Minnesota, Minneapolis, Minnesota:***

- 2003 Teaching assistant, Psych 4801: *Introduction to Statistics*
- 2003-2004 Teaching assistant, Psych 1001: *Introduction to Psychology*
- 2003-2011 Undergraduate directed research supervisor (supervised 2-4 undergraduates per semester)
- 2004-2007 Section leader, Psych 3005W*: *Introduction to Research Methods and Statistics*
- 2006 Teaching assistant, Psych 5606: *Clinical Psychophysiology* (Graduate Level)
- 2007-2009 Teaching assistant, Psych 3051: *Introduction to Cognitive Psychology*
- 2007-2011 Section leader, Psych 3001W*: *Introduction to Research Methods*
- 2009 Teaching assistant, Psych 5015: *Cognition, Computation, and Brain* (Graduate Level)
- 2010 Teaching assistant, Psych 5054: *Psychology of Language* (Graduate Level)
- 2010-2011 Teaching assistant, Psych 4994V*: *Honors Research Practicum*

* Denotes Writing Intensive Course

University of New Mexico, Albuquerque, New Mexico:

- 2012 Lecturer, Psych 650: *Introduction to Clinical Neuroscience*
- 2013 Lecturer, Psych 650: *Contemporary Topics in Psychology, Neuroscience, and Law*

Students Mentored:

- J. Michael Maurer (2011-2018) as a graduate student at the University of New Mexico.
- Aaron Centeno (2013-2014) as an undergraduate honors student at the University of New Mexico.
- Samantha Fede (2013-2015) as a graduate student at the University of New Mexico.
- Julia Lushing (2013-2015) as a graduate student at the University of New Mexico.

Andrea Maxwell (2017-2019) as a postbaccalaureate fellow at NIH/NIDA.

Constance Chen (2017) as part of the NIH/NIDA Summer Fellowship Program.

Katherine Barranco (2018) as part of the NIH/NIDA Summer Fellowship Program for Under-Represented Populations.

Amy Kwarteng (2019) as a postbaccalaureate fellow at NIH/NIDA.

Hannah Olson (2020-2021) as postbaccalaureate research assistant at Hartford Hospital.

Alysssa Michel (2021-present) as an undergraduate research volunteer at Yale University.

Hanxiao Lu (2021-2022) as postbaccalaureate clinical research assistant at Hartford Hospital.

Ryan Murphy (2021-2022) as postbaccalaureate research volunteer at Hartford Hospital.

Seba Gabali (2021-2023) as postbaccalaureate clinical research assistant at Hartford Hospital.

Patrick Fang (2022-present) as postbaccalaureate clinical research assistant at Hartford Hospital.

Evan Stock (2022) as postbaccalaureate research volunteer at Hartford Hospital.

Kira Gresser (2022-present) as postbaccalaureate clinical research assistant at Hartford Hospital.

Dongyu Kang (2023-present) as visiting scholar through Yale University.

Guo Yu (2023-present) as postbaccalaureate research volunteer at Hartford Hospital.

Conference Presentations:

1. **Steele, V.R.**, Sponheim, S.R., & McGuire, K.A. (2003, March). Verbal memory in patients with schizophrenia and first-degree relatives of patients with schizophrenia. Presented at the National Conference on Undergraduate Research, Salt Lake City, Utah.
2. **Steele, V. R.**, Fink, B. C., Maurer, J. M., Arbabshirani, M. R., Sidz, A., Calhoun, V. D., Clark, V. P., & Kiehl, K. A. (2013, Nov). Event-related potential measures of incorrect responses predict completion of

substance abuse treatment. Nanosymposia Presented at the Society for Neuroscience Annual Meeting, San Diego, CA. Selected as Society for Neuroscience's "Hot Topic in Neuroscience".

3. **Steele, V. R. (Symposium Chair)** & Calhoun, V. D. (Symposium Co-Chair; 2015, March). Approaches to identify network connectivity in neuroimaging. Mini-Symposium presented at the Cognitive Neuroscience Society's Annual Meeting, San Francisco, CA.
4. **Steele, V. R.**, Bernat, E. M., Calhoun V. D., & Kiehl, K. A. (2015, March). Neuroimaging measures of cognitive control: Extracting reliable signals. Mini-Symposium presented at the Cognitive Neuroscience Society's Annual Meeting, San Francisco, CA.
5. Calhoun, V. D., & **Steele, V. R.** (2015, March). The chronnectome: Time-varying connectivity networks as the next frontier in fMRI data discovery. Mini-Symposium presented at the Cognitive Neuroscience Society's Annual Meeting, San Francisco, CA.
6. Maurer, J. M., **Steele, V. R.**, Fink, B. C., Vincent, G. M., Calhoun, V. D., & Kiehl, K. A. (2015, June). Dysfunctional error-related processing in psychopathic personality captured using interview-based assessments, not self-report measures. Presented at the Society for the Scientific Study of Psychopathy Biennial Meeting, Chicago, IL.
7. Widdows, M. **Steele, V. R.**, Aharoni, E., & Kiehl, K. A. (2015, June). Predicting recidivism using the Psychopathy Checklist-Revised and the Psychopathic Personality Inventory within a forensic sample. Presented at the Society for the Scientific Study of Psychopathy Biennial Meeting, Chicago, IL.
8. Kiehl, K. A., Lushing, J., **Steele, V. R.**, & Harenski, C. L. (2015, June). Brain imaging in female psychopathy. Presented at the Society for the Scientific Study of Psychopathy Biennial Meeting, Chicago, IL.
9. Anderson, N. E., **Steele, V. R.**, Maurer, J. M., & Kiehl, K. A. (2015, June). Dissociating emotion and attention to emotion in psychopathy. Presented at the Society for the Scientific Study of Psychopathy Biennial Meeting, Chicago, IL.
10. **Steele, V. R.**, Bernat, E. M., van den Broek, P., Collins, P. F., Patrick, C. J., & Marsolek, C. J. (2015, July). Reading what has been inferred: Electrophysiological evidence for dissociable processes. Presented at the Society for Text and Discourse Annual Meeting, Minneapolis, MN.
11. **Steele, V. R.** (2018, October). Advancements toward individualized medicine with machine learning classifiers in neuroscience. Presented at the Society for Psychophysiological Research Annual Meeting, Quebec City, Quebec, Canada.
12. **Steele, V. R.**, (2019, May). Developing treatment targets for substance use disorders with machine learning classifiers. Presented at the Society of Biological Psychiatry Annual Meeting, Chicago, IL.
13. **Steele, V. R.** (2021, January). Machine learning identified therapeutic targets for transcranial magnetic stimulation as a treatment for cocaine use disorder. Presented at the Early Career Investigator Showcase as part of the joint National Institute on Drug Abuse and National Institute on Alcohol Abuse and Alcoholism mini-convention, held remotely.
14. **Steele, V. R.** (Symposium Chair; 2021, June). Transcranial magnetic stimulation as an addiction therapeutic: Insights from clinical and preclinical studies. Symposium presented at The College on Problems of Drug Dependence Annual Meeting, held remotely.
15. **Steele, V. R.** (2021, June). Intermittent theta-burst stimulation as a treatment for cocaine use disorder: An exemplar for neuromodulation to treat substance use disorders. Presented at The College on Problems of Drug Dependence Annual Meeting, held remotely.
16. **Steele, V. R.** (2021, October). From a transcranial magnetic stimulation exemplar to a path forward for a substance use disorder therapeutic. Presented at The 3rd International Congress on XLVII National Conferences Socidrogalcohol, held remotely.

17. **Steele, V. R.** (Symposium Chair; 2022, April). Modulating cognitive systems in substance use disorders and co-occurring clinical diagnoses. Presented at the Society of Biological Psychiatry Annual Meeting, New Orleans, LA.
18. **Steele, V. R.** (2022, April). How an exemplar of chronic neuromodulation for cocaine use disorder is a path forward for treating substance use disorders. Presented at the Society of Biological Psychiatry Annual Meeting, New Orleans, LA.
19. **Steele, V. R.** (Symposium Chair; 2022, June). Event-related potentials and substance use disorders: Identifying clinically relevant metrics to inform therapeutics. Presented at The College on Problems of Drug Dependence Annual Meeting, Minneapolis, MN.
20. **Steele, V. R.** (2022, June). Identifying treatment targets related to dysregulated circuits in substance use disorders with event-related potential measures of response inhibition and error-monitoring. Presented at The College on Problems of Drug Dependence Annual Meeting, Minneapolis, MN.
21. Salmeron, B. J., **Steele, V. R.**, Stein, E. A. (2022, September). Evaluating iTBS as a treatment for cocaine use disorder. Presented at the Addiction 2022 conference: “Enlightening the addicted brain: Cells, circuits, and therapies”. Villasimius, Italy.
22. **Steele, V. R.** (2022, September). Accelerated TBS sessions for addiction treatment. Presented at the Addiction 2022 conference: “Enlightening the addicted brain: Cells, circuits, and therapies”. Villasimius, Italy.
23. **Steele, V. R.** (2022, September). Addressing “Known Unknowns” in the Application of Transcranial Magnetic Stimulation to Treat Substance Use Disorders: An Exemplar of Chronic Neuromodulation for Cocaine Use Disorder. Presented at the Society for Psychophysiological Research Annual Meeting. Vancouver, British Columbia, Canada.
24. **Steele, V. R.** (2023, February). Parameter space in optimization of non-invasive brain stimulation in addiction. Presented at the 5th Annual Brain Stimulation Conference. Lisbon, Portugal.

Invited Presentations:

1. **Steele, V. R.** (2018, April). Circuit targets for TMS addiction treatment: How do we know what we did worked? Presented at the International Conference on Transcranial Magnetic Stimulation and Addiction Treatments, Turin, Italy.
2. **Steele, V. R.** (2018, August). Data analysis steps for preprocessing simultaneous EEG data. Presentation at the Clinical and Cognitive Neuroscience Laboratory, University of Maryland – College Park, MD.
3. **Steele, V. R.** (2018, August). Using TMS to treat addiction: Circuits, Targets, and neuroplastic changes. Presentation to the Department of Psychology, University of Maryland – College Park, MD.
4. **Steele, V. R.** (2018, October). Using TMS to treat addiction: Circuits, targets, and neuroplastic changes. Presentation at Loyola University Medical Center, Stritch School of Medicine, Grand Rounds Chicago, IL.
5. **Steele, V. R.** (2019, January). Modulating dysregulated circuits as an addiction treatment. Presentation at the Department of Psychology, Rosalind Franklin University of Medicine and Science, North Chicago, IL.
6. **Steele, V. R.** (2019, February). Modulating dysregulated circuits as an addiction treatment. Presentation at the Department of Psychiatry, Yale University, New Haven, CT.
7. **Steele, V. R.** (2019, April). From addiction to mental health: Identifying biomarkers for targeted interventions. Presentation at the National Institute of Mental Health, Bethesda, Maryland.
8. **Steele, V. R.** (2019, April). Modulating dysregulated circuits as an addiction treatment. Presentation at the Department of Psychiatry, University of Iowa, Iowa City, IA.
9. **Steele, V. R.** (2019, July). Modulating dysregulated circuits as an addiction treatment. Presentation at the Department of Psychiatry, Stanford University, Palo Alto, CA.

10. **Steele, V. R.** (2020, March). TMS to modulate circuits in addiction: Known unknowns. Presentation at the Department of Psychiatry, Yale University, New Haven, CT.
11. **Steele, V. R.** (2020, October). TMS to modulate circuits in addiction. Presentation at the Department of Psychology, Rutgers University, Newark, NJ (Virtual).
12. **Steele, V. R.** (2021, February). Modulating addicted circuits with transcranial magnetic stimulation. Presentation at the Appetitive Neuroscience Seminar Series, Yale University, New Haven, CT (Virtual).
13. **Steele, V. R.** (2021, September). Developing a new intervention by modulating addicted circuits with transcranial magnetic stimulation. Presented at the Division of Addictions at Yale (DAY), Yale University, New Haven, CT (Virtual).
14. **Steele, V. R.** (2021, December). Developing new therapeutics to treat substance use disorders. Presented at the Clinical Issues for SUD Treatment, Hartford HealthCare, Behavioral Health Network, Hartford, CT (Virtual).
15. **Steele, V. R.** (2022, January). Transcranial magnetic stimulation and treating substance use disorders: What we know and where we should go. Presented at Clinical Grand Rounds, Root Center for Advanced Recovery, Hartford, CT (Virtual).
16. **Steele, V. R.** (2022, January and February). Treating clinical disorders or: How I learned to stop worrying and love TMS. Presented at Olin Neuropsychiatry Research Center Journal Club and Seminar Series, Hartford, CT (Virtual).
17. **Steele, V. R.** (2022, March). A novel intervention for opiate use disorder. Overdose Data 2 Action, Connecticut Department of Public Health, Partners Meeting (Virtual).
18. **Steele, V. R.** (2022, July). Circuit-based approaches to individualized TMS trials. International Network of TMS/tES for Addiction Medicine (INTAM) Webinar Series: Special Topic: Optimizing Non-Invasive Brain Stimulation for Addiction Treatment.
19. **Steele, V. R.** (2022, August). Transcranial magnetic stimulation for treating substance use disorders. Presentation at the Schizophrenia and Neuropharmacology Research Group at Yale, Yale University, New Haven, CT (Virtual).
20. **Steele, V. R.** (2023, March). Transcranial magnetic stimulation and treating substance use disorders: What we know and where we should go. Behavioral Science Research News Hour, MD Anderson, Houston, TX (Virtual).
21. **Steele, V. R.** (2023, April). Neuromodulation to treat opioid use disorder. Yale Center for Clinical Investigation, Research in Progress, New Haven, CT.
22. **Steele, V. R.** (2023, May). Transcranial magnetic stimulation to treat substance use disorders. Addiction Medicine Rounds, New Haven, CT (Virtual).
23. **Steele, V. R.** (2023, August). Transcranial magnetic stimulation as an interventional tool for hedonic hunger and food cravings in metabolic and bariatric surgery patients: Theory and application. International Federation for the Surgery of Obesity and Metabolic Disorders, Napoli, Italy.
24. **Steele, V. R.** (2023, September). Recent Applications of Transcranial Magnetic Stimulation in the Steele Lab. Erasmus School of Social and Behavioral Sciences, Rotterdam, Netherlands.

Book Chapters:

1. **Steele, V. R.,** Pariyadath, V., Goldstein, R. Z., & Stein, E. A. (2018). Reward Circuitry and Drug Addiction. In D.S. Charney, P. Sklar, J.D. Buxbaum, & E. J. Nestler (Ed.) *Neurobiology of Mental Illness* (pp. 587-600). Oxford University Press.

2. **Steele, V. R.**, Ding, X., & Ross, T. J. (2019). Addiction: Informing drug abuse interventions with brain networks. In B.C. Munsell, G. Wu, L. Bonilha, & P.J. Laurienti (Ed.) *Connectomics: Applications to Neuroimaging* (pp. 101-123). Elsevier.
